AI, Fullstack Development, Machine Learning for data analysis and automation.

Professional Profile

Computer Science Civil Engineer graduated from Universidad Andrés Bello, with experience in fullstack web development and projects in Artificial Intelligence, Machine Learning, and Data Science. I have participated in the design and implementation of real-world systems, including AI-assisted platforms, REST API development with JWT authentication, relational databases, and data visualization. I stand out for my ability to learn quickly, teamwork skills, and focus on scalable, results-oriented solutions.

Experience

Universidad Andrés Bello

Viña del Mar, Chile

INTERNSHIP – ACADEMIC COMMUNICATION AUTOMATION WITH AI (N8N)

Aug 2025 – Dec 2025

- Developed automated workflows using n8n to support the creation and dissemination of academic announcements.
- Implemented automation to generate content adapted to different social networks (LinkedIn, Instagram, etc.).
- Integrated AI to automatically select the most appropriate social network and generate post text depending on the type of announcement.
- Logged and stored publication history in a database, enabling traceability and future queries.
- Optimized the publishing process by reducing manual tasks and improving consistency in digital communications.

Instituto de Tecnología para la Innovación en Salud y Bienestar (ITISB)

Remote

PROFESSIONAL INTERNSHIP – VIBE CODING RESEARCH AND AI MODEL EVALUATION

Jan 2026 – Mar 2026

- Conducted applied research on the Vibe Coding methodology, analyzing advantages, disadvantages, and use cases in software development.
- Performed comparative evaluation of different AI models for programming and code generation tasks.
- Designed and executed evaluation pipelines considering code quality, productivity, efficiency, and robustness.
- Documented results and produced conclusions focused on best practices and implementation recommendations.

Highlighted Projects

Thesis – Academic Trajectory Analysis and Selection of Educational Areas

MACHINE LEARNING

- Analyzed longitudinal data on student academic performance.
- Developed classification models to predict macro educational areas.
- Applied supervised Machine Learning techniques and evaluated performance using metrics such as F1-score.
- Used SHAP for interpretability and analysis of relevant variables.
- Focused on non-deterministic statistical associations between academic performance and future educational choices.

Citizen Security Reporting System – Viña del Mar

FULLSTACK

- Developed a web platform for reporting and visualizing citizen security incidents.
- Implemented an interactive frontend with dynamic maps using Leaflet and OpenStreetMap.
- Designed the complete workflow for report creation, storage, and visualization.
- Built a scalable architecture prepared for backend integration with FastAPI.
- Managed data using JSON files and prepared the system for future database persistence.

Territorial Intelligence Platform for Public Safety

FULLSTACK | GIS | DATA VISUALIZATION

- Developed a web platform for geospatial reporting and visualization of public safety incidents.
- Implemented interactive maps and heatmaps using Leaflet and OpenStreetMap to identify incident hotspots.
- Designed an anonymous reporting system with moderation workflows, validation, and administrative management.
- Integrated Supabase for authentication, PostgreSQL database, storage, and Row-Level Security (RLS).
- Designed a scalable full-stack architecture to support municipal decision-making through real-time spatial analytics and data visualization.

Concrete Strength Prediction

MACHINE LEARNING

- Developed predictive models to estimate concrete strength based on physicochemical variables.
- Applied regression techniques and neural networks using TensorFlow and Keras.
- Conducted exploratory data analysis, feature selection, and comparative model evaluation.
- Optimized hyperparameters through systematic search.

CS:GO Player Performance Analysis

MACHINE LEARNING

- Implemented supervised models to analyze competitive performance.
- Applied K-Means clustering to segment players based on behavior and playstyle.
- Detected outliers and used libraries such as pandas and scikit-learn for analysis and visualization.

Production Management System

WEB APPLICATION

- Developed a system for managing production processes and resources.
- Implemented backend API and business logic for operational data handling.
- Designed a modular structure oriented toward scalability.
- Managed CRUD operations and domain entity modeling.

E-commerce System – Online Store Platform

FULLSTACK

- Developed a complete web system for online sales management.
- Implemented backend using Laravel, including authentication, user management, and business logic.
- Developed CRUD features for products, orders, and administration.
- Integrated frontend and structured the system using MVC architecture.

Education

Andrés Bello University

Viña del Mar, Chile

COMPUTER SCIENCE ENGINEERING

2020 – 2025

- Professional Degree: Computer Science Engineer (2025).
- Bachelor of Engineering Science (2025).
- Bachelor of Engineering (2025).

Technical Skills

Programming Languages	Python, TypeScript, JavaScript, Java, C++
Frontend	Angular, React, HTML, CSS, SCSS
Backend	FastAPI, Node.js, Laravel
Databases	PostgreSQL, SQL
Automation	Docker, n8n, AI for repetitive tasks
Artificial Intelligence	Prompt design, model evaluation, Vibe Coding, research
Data Science / ML	scikit-learn, TensorFlow, Keras, Pandas, SHAP
Tools	Git, GitHub, Docker, Power BI, Jira, Trello
Other	REST APIs, client-server architecture, external service integration, data visualization
